SHORTAGE OF SCIENTISTS (The Washington Post and

(The Washington Post and Times Herlad)

Chairman Lewis L. Strauss of the Atomic Energy Commission dame home from the Geneva Conterence on the Peaceful Uses of Atomic Energy filled with concern ever the inadequacies of American scientific training. Like so many scientists and public offican scientific training. Like somany scientists and public officials, he was impressed by the iisturbing fact that Russia appears to be training far more scientists and engineers than is his country. He quoted Allen Dulles, Director of Central Inteligence, as having reported that under present programs Russia in this decade will graduate 1.200.000 this decade will graduate 1,200,000 scientists and engineers, compared with about 900,000 in the United States. In a speech here the other night, Mr. Strauss said that "our own colleges and universities are turning out only about half the number of argineers we require today."

Members the Government, educators is scientists as well as the press ave repeatedly called attention to this shortage. It is encouraging to how is encouraging to have Mr. Strauss add the weight of his influence to the attempt to awaken the country to the imporance of doing something about it. We wonder if part of the answer was not indicated at the meeting of the Discrete and the word of Education hald the trict Board of Education held the same, day Mr. Strauss spoke. There 14 speakers presented a shocking picture of crowded classrooms, teacher shortages and in-sufficient textbooks. While these sufficient textbooks. While these conditions prevail in the elementary and secondary schools, as they clearly do prevail here and in other cities, the future technical students do not receive adequate training, and many who might otherwise become scientists and organizers do not have their and engineers do not have their interest aroused at the proper age.
